Hi Rod,

Jim Smith stopped over and mentioned you need some help getting into MTS.

Do you have Checkpoint Endpoint Connect installed on your computer? If not her is the location where you can get it. <http://longitude.mts.com/si4/>.

Select the download Checkpoint Endpoint Connect.

Once that is done you will need to install the RSA app on your phone.

*****Be Careful Read before doing these steps*****

Go to the iPhone Apps store and install the RSA app.

Here is you RSA file. The password for the file is 1234A.

Open the email on your phone and click on the file enclosed, it will automatically connect to the RSA app.

Once the new token is accepted in the phone, exit out of the RSA app and launch the RSA app again on your iPhone.

Open up EndPoint Connect on your PC and tab down to the PASSCODE. (This is the only place you enter numbers) no more PIN on EndPoint Connect on your PC.

On the phone use the pin 0000, then use the PASSCODE from the iPhone and type in the PASSCODE on your computer. Only just the PASSCODE.

The computer will then will ask you if you want to setup a new pin. Answer Y, and then enter a new pin, This PIN is for the iPhone only, it's what you use when you want to get to your PASSCODE from your iPhone.

Please let me know if you need any help.

Duane Fox
