治療の期間 Period of treatment ☐ Outpatient visit ☐ Home visit ☒ Hospitalization	外来 From 往診 入院 Date : January 21, 2015 Date : January 22, 2015
傷病名 Diagnosis Unstable Angina Pectoris	
経過 State of illness Mr. LARSON was transferred to our hospital because of two hours lasting chest discomfort feeling on January 21, 2015. The symptom disappeared at our hospital. There was no ST change on ECG and no abnormalities on Lab data. But, percutaneous catheter intervention (PCI) with stent had been performed three times before. Therefore, we estimated that the fatality rate was 30% without cardio angiography (CAG) and PCI. So, we recommended admission and CAG to him. He was admitted with suspicion of unstable angina pectoris and cardio angiography (CAG) was performed immediately. CAG showed another occlusion of coronary artery (75-90% occluded mid LCx). Then, Stenting (Xience Expedition 2.5x18mm) was performed and finished successfully. There was no adverse event during one day observe after the procedure. He was discharged on January 22, 2015.	
他の機関で治療を受けた場合 その病院名 Name of facility if services were provided for this illness or injury. No.	
治癒日 Date of recovery He needs Follow up at his regular doctor.
